Key Insights

1. Memory / AI Memory is the Consensus Whale Trade

Micron (MU) is the single most over-lapped position, appearing in Appaloosa, Coatue, and Situational Awareness. Tepper trimmed for profit-taking after a 1,300%+ run, but Coatue added aggressively (+1,794%) and Aschenbrenner made it a 27.5% portfolio weight. Your MU position is directionally aligned with the highest-conviction theme in these filings.

2. TSMC is the Foundational AI Foundry Bet

Three whales — Tepper, Laffont, and Aschenbrenner — all hold TSMC. Tepper has bought it for six consecutive quarters. Even a small Roth position puts you on the same side as this institutional consensus.

3. AI Data Center / Power Infrastructure is the New Front

Situational Awareness and Coatue are building positions in the physical layer of AI: Core Scientific (CORZ), Applied Digital (APLD), Hut 8 (HUT), Bloom Energy (BE), and Constellation Energy (CEG). Your portfolio already has direct exposure to CORZ, APLD, and BE — matching this emerging whale thesis.

4. Cohen and Sundheim Are Not Directly Aligned With Your Book

Point72's 4,738 positions are too diversified to find clean overlaps, and D1's book is dominated by SpaceX (SPCX) and industrials — neither of which overlaps your current holdings.
