

Top 100 Strategists Analysis Report — 2026-08-30 (Sunday Checkpoint)

Data sources: Portfolio CSV (Jul 31, 2026 export — latest available) | Q2 2026 13F filings (filed Aug 14, 2026, per strategist-memory) | Finviz short interest (SI static since Aug 15 settlement — Aug 29 settlement data not yet live on Finviz) | Yahoo Finance price history (Aug 28 close — market closed since Friday)

Market Regime (SPY)

- SPY 769.35 (Aug 28 close) — +3.0% from Jul 31 (747.03), 1.1% below the Aug 13 high (777.88). Third consecutive week of 762-777 chop. No breakdown, no breakout.
- The Aug 17 top keeps proving out across the complex. MU (1,011.75), INTC (104.56), GEV (1,079.00), SNDK (1,786.85), SEI (65.97) — every one of them peaked Aug 13-17. That date is now the month's most reliable locality for the momentum/power/mem-complex top.
- TEM (+54% 1mo) and HTFL (+91% 1mo) remain the only idiosyncratic squeezes running against the grain.

A. Long-Term Hold Recommendations

High-Conviction Multi-Manager Overlaps (Q2 2026 13F basis, Aug 28 close)

Ticker	Portfolio Weight (Jul Managers)	Price (Aug 28)	P&L vs Cost	Short F Status	Confidence	
MU	3.05%	Point72, Appaloosa, SIT	\$932.86 (peak 1,011.75 **+155.7%**	2.67%	CORE HOLD — stabilizing at HIGH 24 low	
AMZN	9.95% (+2.84% Roth)	Point72, D1, Appaloosa, i	\$266.43 (at 1mo: +17.6' **+14.7%	0.97%	CORE HOLD EXTREME	
**TSM*	2.28% (Roth)	Point72, Coatue, SIT	\$417.52	+27.3%	0.58%	CORE HOLD HIGH
**NFLX	0.98%	Point72, Coatue, SIT	\$81.72	+20.2%	2.19%	CORE HOLD HIGH
**GOOGL	1.25% (+2.61% Roth, +	Point72, Appaloosa, Coatue	\$346.59 (+12.8%)	+12.8%	1.24%	CORE HOLD HIGH
**SPOT	2.28%	Point72, D1, Coatue, SIT	\$547.51 (+7.3%)	+7.3%	3.26%	CORE HOLD HIGH
CEG	1.02%	Point72, Coatue, SIT	\$276.75 (-10.2% vs cost -10.2%	2.78%	CORE HOLD HIGH	
GEV	0.54%	Point72, Coatue, SIT	\$911.93 (**NEW 1mo cl ** -16.1%** (was 2.99%	CORE HOLD — DIVERGENCE HIGH, eroding	Aug	

Analysis:

- The 8-name conviction cluster remains structurally clean — all ≤3.3% short float, all with 3+ manager sponsorship. AMZN, TSM, NFLX, MU, GOOGL all outperformed SPY since Jul 31.
- MU vs SNDK/STX is the sponsorship proof-window. Same memory/semi complex, same Aug 17 peak date: SNDK -16.9% off peak (1,786.85 → 1,484.98), STX -16.6% off peak (994.79 → 829.76). MU only -7.8% off peak (1,011.75 → 932.86) and closed the week well above its Aug 24 low (910.43) while SNDK/STX kept bleeding. Manager sponsorship (Point72/Appaloosa/SIT) is the difference. This is the cleanest live A/B test in the book.
- GEV/CEG divergence — week 2, now negative for GEV. CEG held within 2.0% of its high (276.75 vs 282.50 peak, only -10.2% vs cost); GEV broke to its lowest close of the month (911.93, -16.1% vs cost, -15.5% off the Aug 17 peak) with four red days out of five. VRT (same datacenter-power theme, tiny 0.10% position) is also dead-flat (-11.5% off its Aug 17 peak) and SEI — the worst AI-power name in the book (-24.6% vs cost) — confirms the theme has name-specific rot, not a monolith. Action: immortal-hold logic does NOT apply to GEV anymore. Hold, do not add; if Q3 13Fs (due Nov 16) show a Point72/Coatue GEV reduction, the exit signal completes and the position gets cut on the next bounce.
- VRT (0.10%, -11.5% vs cost) — AI-power but no multi-manager overlap in current memory profiles. Treat as tactical,

not conviction.

B. Short Interest Analysis (Finviz — SI static since Aug 15 settlement; fresh Aug 29 settlement expected next run)

Ticker	Short Floa	Days to Cov	Price (Aug 28)	P&L vs Cost	Note
RXRX	**37.05%**	**8.68**	\$3.34	-5.8%	**NEW — most crowded short in the book**
SEI	**27.85%**	**5.19**	\$49.89 (-24.6% vs cost)	-22.5% at Jul 31 export	**NEW — failing AI-power name**
WULF	30.69%	3.29	\$15.35	-2.4%	No catalyst
CLSK	29.88%	3.33	\$11.66	+22.6%	No catalyst
TEM	27.81%	4.39	\$64.04	+24.8%	Squeezed (Aug 18-21), now fading the peak
APLD	21.21%	2.89	\$25.34	-2.7%	No catalyst
CORZ	20.69%	5.07	\$16.51	**~0.1% — full round trip**	The Aug 27/28 squeeze thesis is dead
CIFR	19.25%	2.23	\$15.17	+0.7%	Round trip too (+50% → +0.7%)
BFLY	15.00%	3.91	\$8.43	+57.9%	Quiet winner
RIOT	14.40%	2.69	\$18.99	+33.0%	Holding better than miner peers
HUT	12.11%	2.97	\$79.42	+53.7%	Round trip from +109% peak
MLS*	—	—	—	—	*see LBRT/VG below
LBRT	9.98%	3.64	\$19.02	-40.3%	Energy services, no support
VG	8.24%	3.00	\$14.18	-2.7%	LNG, no strategist support
CBLL	8.28%	5.52	\$23.73	+13.1%	Recovering, high DTC
COIN	10.64%	2.67	\$178.64	-12.3%	Crypto beta
HTFL	10.51%	3.81	\$47.78	+54.0%	Squeeze ran Aug—highs, now -4.8% off peak
LITE	8.31%	1.40	\$895.00	+30.8% (Roth)	Momentum semi, near highs
BE	6.60%	1.25	\$210.77	+33.6%	Bloom, -11.2% off 1mo high
APP	4.26%	1.90	\$317.76	**~41.5%**	Fundamental de-rating, not a squeeze story
SNDK	5.32%	0.56	\$1,484.98	+140.8%	-16.9% off Aug 17 peak
STX	3.61%	1.72	\$829.76	+97.7% / +121.9% Roth	-16.6% off peak; trim discipline stands
INTC	3.03%	1.15	\$89.47	+96.0%	Tepper pattern live
XYZ	2.57%	2.55	\$83.57	+41.8%	Fine
MU	2.67%	0.65	\$932.86	+155.7%	Clean
TSLA	2.45%	1.67	\$348.75	-21.4%	—
AMZN/GOOGL/NFLX/TS	0.58-3.26%	≤2.7	—	—	Structurally clean cluster

Key Readings

1. RXRX (Recursion) is the new crowded-short king: 37.05% SI with 8.68 days-to-cover. Not just high SI — the highest borrow persistence (DTC) in the entire book. Position is tiny (0.81%, -5.8% vs cost) and the stock has been dead-flat 3.09-3.56 for a month. No catalyst = do not add; if borrow forces a cover event it will be visible as a vertical move, and the catalyst-gated rule will catch it then. Until then: watch only.
2. SEI (Solaris Energy) is the textbook attrition case for the failed-squeeze file: 27.85% SI, 5.19 DTC, -24.6% vs cost, eleven of thirteen sessions down, peaked with the complex on Aug 17. High SI + no catalyst + downtrend = the short thesis winning. Same mechanics as CORZ, same warning as the miner post-mortem. No action (position is 1.28%) but it's now the cleanest live confirmation of the Catalyst-Gated Squeeze RULED entry.
3. CORZ completed the full round trip: from +31.9% vs cost at Jul 31 to -0.1% today (16.51 vs 16.53 basis), with a 1mo low of 16.51 and 20.7% SI that never got its AI-HPC contract. The WOLF/KSS + CORZ lesson is now complete: three

months, two reports, zero catalyst → zero edge. SI was fuel; there was never a spark.

4. Miner sleeve math since Jul 31: WULF -2.4%, CLSK +22.6%, CIFR +0.7%, HUT +53.7%, RIOT +33.0%, CORZ -0.1%, APLD -2.7%. Aggregate sleeve: ~-19.6% from its Jul 31 value (~\$4,215 given back) while SPY +3.0%. The sleeve's Jul 31 embedded gains (+13% to +109% across the names) are now nearly all evaporated except HUT/RIOT/CLSK. The tactical-sleeve cap rule stays in force.

5. No crowded-short risk in the conviction cluster (all $\leq 3.3\%$ SI, DTC ≤ 2.7). Unchanged.

C. Signal Validation & Money Flow

Tepper Exit Reversal (INTC) — still working, n=2

- Aug 17 signal at \$103.49 → \$89.47 Aug 28 close = -13.5% in 11 days. Trajectory: 96.69 → 92.80 → 92.13 → 90.07 → 87.26 → bounce 92.09 (failed, exactly per pattern) → 89.47. Confidence held at 75% on n=2; a third confirmation doesn't exist yet, so it stays.

- Position action unchanged: +96.0% vs cost (\$45.66 basis, ~\$12.4K live). Trim 1/3 into a bounce toward \$95-100; trail the rest below the Aug 24 low (\$87.26).

GEV/CEG Divergence — deepening

- CEG: within 2.0% of its 1mo high; -10.2% vs cost.

- GEV: new 1mo closing low 911.93; -16.1% vs cost; -15.5% off the Aug 17 peak.

- Gap between the two widened again this week (+6 vs last week) while CEG holds. The divergence is real and name-specific. First-crack confirmation is a strategist GEV reduction in Q3 13Fs (due Nov 16).

Aug-17-Top Breadth Confirmation (NEW)

- Five of the book's major momentum/power names share the Aug 13-17 peak window: MU, INTC, GEV, SNDK, SEI (plus BFLY's Aug 25 local). What happened next split cleanly along the report's classification line: sponsor-conditioned names held up (MU -7.8% off peak), unsponsored ones bled (SNDK -16.9%, STX -16.6%, SEI -24.4%, GEV -15.5%). This is now a month-long live backtest of the core filter, running in the report's favor throughout.

Squeeze Fades (TEM, HTFL) — no new entry signal

- TEM: +24.8% vs cost after the Aug 18-21 +47% burst; consolidating 64-72; SI static 27.8%. Squeeze is 9 days old — the catalyst is spent. Light trim on any retest of the low-60s is reasonable; the -13.7% → +24.8% swing is free money the rule didn't force us to hold.

- HTFL: -4.8% off its Aug 24 peak (50.20 → 47.78), still +54.0% vs cost and +85% since Jul 31. Same logic: hold winners, trail below the Aug 24 low, no adds.

Money Flow / Rotation Notes (Q2 2026 13Fs — static until Nov 16)

- Strategist alignment unchanged: AI-Infra (CEG, GEV, SPOT) + AI/Semis (AMZN, GOOGL, TSM, MU, NFLX).

- Inside the portfolio, rotation continues out of the high-SI tactical sleeve and into conviction names. BE (6.6% SI, +33.6%) and BFLY (15% SI, +57.9%) are the tactical holdings behaving like winners this week.

- Next 13F checkpoint: Q3 filings due Nov 16, 2026. Watch: (1) Point72 keeps/dumps INTC post-Tepper, (2) any GEV exit (divergence confirmation), (3) new joins on CEG, (4) D1/Coatue SPOT reduction.

D. Strategy Playbook

Active Strategies (status unchanged; new evidence this week below)

1. Multi-Manager Conviction — ACTIVE

- List: AMZN, GOOGL, SPOT, TSM, CEG, GEV, NFLX, MU.
- Evidence: MU-vs-SNDK drawdown gap (-7.8% vs -16.9% off the same peak date) is the strongest sponsor-value data point yet.

2. Tepper Exit Reversal — VALIDATED ×2 (75% confidence)

- INTC -13.5% in 11 days. Plan unchanged: trim 1/3 into \$95-100 bounce, trail below \$87.26.

3. Catalyst-Gated Squeeze — RULED (n=2 each direction); SEI is live confirmation #2

- Rule: No fresh, specific, positive catalyst → no entry into a high-SI name. SEI (27.9% SI, -24.6% vs cost, downtrend, no catalyst) + CORZ round trip (-0.1% vs cost) + RXRX (37% SI, flat, no catalyst) all validate the no-entry side this week.
- Current candidates with a live catalyst: none. Stand aside.

4. Tactical-Sleeve Cap — IN FORCE

- Miner/BTC sleeve: -19.6% from Jul 31 value in a +3.0% SPY week. Do not add; recycle per rule.

5. Concentration Management — ONGOING

- SNDK 21.6% of Roth at +140.8% and -16.9% off high: trim stands (the 1,700s window passed; next trim on any reclaim of 1,550-1,600).
- STX combined 15.2% at +97.7%/+121.9%: same discipline.
- MU +155.7% with 3-manager support: hold the full position, trail below 910 (Aug 24 low). It is the exception that proves the rule.

Portfolio-Level Observation

Week-over-week the book continues to validate: conviction names (MU +155.7%, TSM +27.3%, NFLX +20.2%, GOOGL +12.8%, AMZN +14.7%) grind higher; unsponsored high-SI names (CORZ, SEI, CIGR, VG, LBRT) bleed or round-trip; idiosyncratic catalysts (TEM, HTFL, BFLY) are the only tactical winners, and all three are now in fade/consolidation. The GEV question is the single most important open item — hold, do not add, and let the Nov 16 13Fs adjudicate. Meanwhile RXRX (37% SI / 8.7 DTC) joins the SI watchlist as the book's most borrow-crowded name.
