High-Conviction Overlaps

The following holdings in the user's portfolio overlap with the Q4 2025 13F filings of tracked whale managers:

Symbol	Holding Name	Overlapping Whale Manager	Conviction / Note
---	---	---	---
BE	Bloom Energy	Alexander Aschenbrenner (SIT)	High - Top position (20.6% weight) for SIT
CORZ	Core Scientific	Alexander Aschenbrenner (SIT)	High - Significant addition (+42%) for SIT
APLD	Applied Digital	Alexander Aschenbrenner (SIT)	High - Significant addition (+87%) for SIT
SNDK	SanDisk	Alexander Aschenbrenner (SIT)	Extreme - Massive build-out (+817%) for SIT
CIFR	Cipher Mining	Alexander Aschenbrenner (SIT)	High - Core holding for SIT
SEI	Solaris Energy	Alexander Aschenbrenner (SIT)	High - Meaningful addition (+62%) for SIT
RIOT	Riot Platforms	Alexander Aschenbrenner (SIT)	High - Meaningful addition (+72%) for SIT
HUT	Hut 8	Alexander Aschenbrenner (SIT)	High - Meaningful addition (+44%) for SIT
CLSK	CleanSpark	Alexander Aschenbrenner (SIT)	High - New position for SIT
LBRT	Liberty Energy	Alexander Aschenbrenner (SIT)	High - New position for SIT
LITE	Lumentum	Alexander Aschenbrenner (SIT)	High - Top position (11.2% weight) for SIT

Analysis Summary

There is an extraordinary overlap between the current portfolio and **Alexander Aschenbrenner's**

(SIT)** Q4 2025 strategy. The portfolio is heavily aligned with SIT's "physical backbone of AI" thesis, specifically focusing on:

- **Energy & Power:** Bloom Energy (BE), Solaris Energy (SEI), Liberty Energy (LBRT).
- **AI Infrastructure/GPU Clouds:** Core Scientific (CORZ), Applied Digital (APLD).
- **Bitcoin Miners (Pivoting to AI):** Riot Platforms (RIOT), Hut 8 (HUT), Cipher Mining (CIFR), CleanSpark (CLSK).
- **Memory & Networking:** SanDisk (SNDK), Lumentum (LITE).

No significant overlaps were identified for Steven Cohen (Point72), Daniel Sundheim (D1), David Tepper (Appaloosa), or Philippe Laffont (Coatue) based on available Q4 2025 top-holding data.

****Conclusion:**** The portfolio is currently a high-conviction bet on the AI physical infrastructure layer, mirroring the SIT fund's aggressive pivot away from chip designers toward power, cooling, and data center capacity.
