

Top 100 Strategists Analysis Report - 2026-08-28

Data sources: Portfolio CSV (Jul 31, 2026 export - latest available) | Q2 2026 13F filings (filed Aug 14, 2026, per strategist-memory) | Finviz short interest snapshot (live, Aug 28 - SI static since Aug 15 settlement; next settlement ~Aug 29) | Yahoo Finance price history (live, Aug 28)

Market Regime (SPY)

SPY 771.18 - +3.2% from Jul 31 (747.03), sitting 0.9% below the Aug 13 high (777.88). Two weeks of chop between 762-777. Consolidation, no breakdown, no breakout. **Aug 17 = momentum complex local top.** SNDK (-17.1% off peak), STX (-16.0%), GEV (-14.8%), and INTC (-14.0% off high) all peaked Aug 13-17 and rolled over. CEG is the exception - it held and printed a marginal new high (282.41) on Aug 27. **TEM squeezed -4.7% Aug 18-21 (49.36 -> 72.69) against the grain** - idiosyncratic catalyst, not market beta.

A. Long-Term Hold Recommendations

High-Conviction Multi-Manager Overlaps (Q2 2026 13F basis, live prices)

Tick er	Portfolio Weight (Jul 31)	Managers	Live Price	Live P&L vs Cost	Short Float	Status	Confide nce
AM ZN	9.95% (+2.84% Roth)	Point72, D1, Appaloosa, Coatue, SIT	\$265.61 (+12.8% since Jul 31)	**+14.3%**	0.97%	CORE HOLD	EXTRE ME
MU **	3.05%	Point72, Appaloosa, SIT	\$920.77	**+152.4% (was +139.8%)	2.67%	ACCUMULATING	MEDIU M-HIGH
**GO OGL **	1.25% (+2.61% Roth, +0.89% GOOG)	Point72, Appaloosa, Coatue, SIT	\$346.87 (+4.0%)	+12.9%	1.24%	CORE HOLD	HIGH
SP OT	2.28%	Point72, D1, Coatue, SIT	\$551.56 (+5.5%)	+8.0%	3.26%	CORE HOLD	HIGH
TS M	2.28% (Roth)	Point72, Coatue, SIT	\$419.99 (+4.1%)	+28.0%	0.58%	CORE HOLD	HIGH
NF LX	0.98%	Point72, Coatue, SIT	\$82.03 (+12.1%)	+20.6%	2.19%	CORE HOLD	HIGH
CE G	1.02%	Point72, Coatue, SIT	\$280.30 (near 1mo high)	** -9.0%** (was -14.4%)	2.78%	CORE HOLD	HIGH
GE V	0.54%	Point72, Coatue, SIT	\$919.78 (**1mo low close**)	** -15.5%** (was -9.7%)	2.99%	CORE HOLD - [!] DIVERGENCE WATCH	HIGH, eroding

Analysis:

The conviction cluster is doing its job: AMZN (+14.3%), MU (+152.4%), NFLX (+20.6%), TSM (+28.0%) all outperformed SRY since Jul 31. All eight names carry <= 3.3% short float - structurally clean. **MU is now the single best strategist-supported position in the book** (+152% vs cost, \$7,186 live on a \$2,847 basis) - and it held up better than pure-momentum storage names (SNDK/STX) during the Aug 17-28 drawdown. Manager sponsorship matters in drawdowns. **[!] NEW: GEV/CEG divergence.** Same AI-power theme, opposite behavior: CEG recovered to within 0.8% of its monthly high; GEV closed at its lowest level of the month (919.78, -14.8% off the Aug 17 peak, -15.5% vs cost). This looks name-specific, not thematic. **Action:** hold, but this is the first crack candidate. If a Point72/Coatue reduction in GEV shows up in Q3 13Fs (due Nov 16), that confirms the exit signal - and per the playbook, strategist exits precede further downside.

B. Short Interest Analysis (Live - Finviz, Aug 28, 2026)

SI values are unchanged from the Aug 27 report (exchange settlement cadence; next settlement ~Aug 29). Prices are live.

Ticker	Short Float	Days to Cover	Live Price	P&L vs Cost (was Jul 31)
WULF	30.69%	3.28	\$15.22	-3.2% (was +13.3%)
CLSK	29.88%	3.31	\$11.75	+23.5% (was +52.8%)
TEM	27.82%	4.42	\$65.59	**+27.8% (was -13.7%) - SQUEEZED**
APLD	21.21%	2.87	\$25.27	-2.9% (was +7.5%)

Key Readings

1. **The BTC-miner sleeve crashed while the market consolidated.** Jul 31 -> Aug 28: CIBR -33.1%, HUT -26.5% (52w high was \$140.80 - a full round trip), CORZ -25.3%, CLSK -19.2%, WULF -14.6%, RIOT -13.6%, APLD -9.7%. Combined sleeve value fell ~\$4,300 (-20%) while SPY gained +3.2%. The report's standing classification - tactical, no multi-manager support, high SI - was the right filter. These are not long-term holds and should be sized accordingly.
2. **The great natural experiment resolved: catalyst decides squeeze outcomes, not SI.** Same high-SI bucket, opposite results this month: TEM (27.8% SI) +47% in 3 days on a positive catalyst; HTFL (10.5% SI) +86% since Jul 31 into its 52w high. CORZ (20.7% SI) and the miners had no catalyst and bled 10-33%. **SI is fuel; the catalyst is the spark - and without a spark, fuel just sits there while the stock bleeds.**
3. **CORZ: the Aug 27 "best squeeze candidate" call is dead.** No AI-HPC contract materialized; the stock ground to its 1-month low (-19.3% from mid-August). The WOLF/KSS rule (SI alone is not an entry signal) prevented a bad entry - validated again.
4. **APP is not a short-squeeze story - it's a broken momentum name** (4.3% SI, but -40.8% vs cost, 52w high \$745.61 -> \$321.85). Pure de-rating. No crowded-short dynamic either way; treat as a fundamental hold-or-exit decision, and watch whether strategists exited in Q3 filings.

C. Signal Validation & Money Flow

? Tepper Exit Reversal - CONFIRMED AGAIN (INTC)

Aug 17 signal (Appaloosa Q2 13F exit) at \$103.49 -> Aug 28: **\$89.93 = -13.1% in 11 days** (SPY roughly flat over the window). Trajectory: 96.69 -> 92.80 -> 92.13 -> 90.07 -> 87.26 (low) -> bounce to 92.09 (Aug 27) -> **failed bounce, 89.93 today**. The Aug 27 bounce failed exactly as the pattern predicts - lower highs, no reclaim of \$95-100.
Position action unchanged: +96.9% vs cost (\$45.66 basis), \$12,448 live. House money. Trim 1/3 into any bounce toward \$95-100; trail the rest below the Aug 24 low (\$87.26).

? Aug 17 De-Risk Cluster - Direction Validated

The Aug 17 report downgraded INTC and flagged SNDK/STX for trim-into-strength. SNDK and STX both peaked Aug 17 (1786.85 / 994.79) and fell 16-17% over the following two weeks. The momentum top and the strategist-exit signal landed the same week - the filter is early when it matters.

Money Flow / Rotation Notes (Q2 2026 13Fs, filed Aug 14 - static until Nov 16)

Strategist alignment unchanged: AI Infra (CEG, GEV, SPOT), AI/Semis (AMZN, GOOGL, TSM, MU, NFLX) and concentrating in conviction names (AMZN, MU) and idiosyncratic squeezes (TEM, HTFL, LITE +29.8%).
 Next 13F checkpoint: **Q3 filings due Nov 16, 2026**. Watch: (1) does Point 72 keep INTC post-Tepper; (2) does anyone exit GEV (divergence watch), (3) does anyone new join CEG, (4) D1/Coatue SPOT reduction.

D. Strategy Playbook

Active Strategies

1. Multi-Manager Conviction - ACTIVE

Evidence this month: conviction names outperformed the tactical sleeve by 25-35 points since Jul 31. Maintain. GEV moved to divergence watch (see A).

2. Tepper Exit Reversal - VALIDATED x2 (75% confidence)

INTC: -13.1% in 11 days post-signal, failed bounce, still working. Execute the trim/trail plan.

3. Catalyst-Gated Squeeze - PROMOTED from speculative to RULED (n=2 each direction)

Wins: TEM +47% (Aug 18 -> 21), HTFL +86% (month). Losses avoided: CORZ -18% from signal, miners -10 to -33%.
 Rule: **Require a fresh, specific, positive catalyst (contract, earnings inflection, guidance raise) BEFORE entering a high-SI name. No catalyst in a consolidating market - the short thesis wins by attrition.**

Current candidates: none with a live catalyst. CORZ needs an AI-HPC contract that hasn't come; WULF/CLSK 30% SI but no spark. Stand aside.

4. Tactical Sleeve Cap - NEW RULE

The miner/BTC sleeve lost 20% in a +3.2% market with zero strategist support. Cap the entire high-SI tactical sleeve (miners + speculative biotech) at its current footprint; recycle into conviction names on weakness (CEG sub-\$270 was the August gift; GEV sub-\$920 is the current one - but only after the divergence question resolves, size half).

5. Concentration Management - ONGOING

SNDK cut 15% on 80% attrition; trim-into-strength stands (it's -17% off the Aug 17 high; the trim window was the 1,700s). MU at +152% is the exception that proves the rule: it has 3-manager sponsorship and 2.7% SI; the momentum names don't.

Portfolio-Level Observation

The month since Jul 31 split the book cleanly along the report's own classification line: strategist-supported conviction names gained 8-152% (AMZN, MU, TSM, NFLX, LITE-adjacent semis) while the unclassified high-SI tactical sleeve lost 10-33%. TEM

and HTFL were the only tactical wins, and both required idiosyncratic catalysts. The playbook's core filter - multi-manager support + low SI = hold; no support + high SI = rent, don't own - is now validated across a full month of live data. Posture: keep recycling tactical gains into the conviction cluster on dips, keep trailing stops on the +100% momentum names (SNDK, STX, INTC), and let the GEV divergence question resolve before adding to AI-power.
