

Long-Term Holds Report

Inflation-Beating Compounders -- September 1, 2026

Prepared by: Long-Term Holds Agent | Sources: Whale Watch, Strategists, Daily Brief, Advisor, History Rhymes

Long-Term Holds Report -- September 1, 2026

Prepared by: Long-Term Holds Agent (Spock)

Sources synthesized: Whale Watch (Aug 31, Q2 13F re-validation) · Top 100 Strategists (Aug 31) · Daily Brief (Aug 31) · Financial Advisor value screen (Aug 31) · History Rhymes (Aug 23) · Strategist Memory (Aug 22) · Trading Arena (through Aug 26) · LTH Memory (Aug 24)

Unattended run note: 13Fs are static until Nov 16 (Q3 cycle). Short-interest data still Aug 15 settlement. Prices are Friday close / Monday Aug 31 intraday -- verify live before any order.

1. Executive Summary

The regime has shifted from "rate cuts + soft landing" to "hawkish repricing + oil shock." Chair Warsh's Jackson Hole speech called inflation "more concerning" (sticky 3.7%), nearly doubling September rate-HIKE odds to ~52-57%. Meanwhile the 6-month-old Iran war keeps Brent above \$90, with ~43% of global oil production flowing from conflict zones and >10% of global refining offline. This is a genuinely stagflationary mix: inflation pressure from energy, discount-rate pressure from the Fed.

Valuation discipline is the whole game right now. History Rhymes (Aug 23): Shiller CAPE ~42 -- top 1% of 155 years of history; top-10 concentration 36-40% -- highest on record, ABOVE the dot-com peak; tech at 32% of the index matches 2000. The closest rhyme is 1999-2000. That does not mean immediate crash -- it means new money goes only into names with real earnings, pricing power, and multi-manager sponsorship. Nothing narrative-driven.

Inflation math: CPI ~3.0-3.7% means cash loses ~3% real per year. The bar for this portfolio remains >7% nominal minimum; every Tier 1 name must be able to raise prices through this regime.

Top 3 conviction holds: AMZN (5-manager overlap, Tepper's #1 at 15.4%), MU (strongest whale consensus, sponsor test passed twice -- but NO new money), GOOGL (4 managers, ALL adding).

Changes this week: GEV broke its 900 psych level intraday (HOLD, DO NOT ADD). AMD whale consensus flipped negative (downgraded to REVIEW/TRIM). TSM flagged as the portfolio's best size-up candidate (4/5 whales, only \$387 held).

Cash allocation: hold ~15-20% dry powder. With September hike odds ~50/50 and CAPE at 42, cash is a position. A jobs-report-driven selloff Friday (Sept 4) would be a gift for the GOOGL add-on-dip plan.

2. Tier 1: Core Holdings (70% target)

Asset | Manager(s) | Entry | vs Cost | Conviction | Thesis | Moat

AMZN | 5 whales: Tepper #1 (15.4%), Coatue 5.8%, P72, D1, SIT | Q4 2025 | +12.2% | EXTREME | Retail+AWS+Ads; Tepper AND Coatue adding | Scale + logistics

GOOGL/GOOG | Tepper, Coatue, D1 all ADDING + P72 | Q4 2025 | +10.6% | HIGH | Search+Cloud+AI at -10% off high | Search monopoly

MU | SA 27.5%, Tepper 14.6%, Coatue 7.5%, P72 | 2026 | +159.5% | HIGH (existing only) | HBM memory supercycle, contracted demand | Supply contracts

V | Point72 + implied quality | Portfolio | -- | HIGH | Payments network, inflation pass-through | Two-sided network

BRK.B | Buffett | Portfolio | -- | HIGH | Permanent capital, cash for drawdowns | Diversified earnings

NFLX | P72, Coatue, SIT | Q4 2025 | +19.1% | HIGH | Streaming pricing power | Content + network

SPOT | D1 adding; P72/Coatue trimming | Q4 2025 | +7.1% | HIGH | Marketplace take-rate compounder | Two-sided marketplace

Notes:

* AMZN Monday softness (-2.0%) is a watch item, not a signal -- no strategist exits exist yet (13Fs static). Two consecutive down Mondays would upgrade the watch.

* MU is the discipline test of the quarter. Whale consensus is the strongest in the book (SA/Coatue adding, Tepper trimmed), and the sponsor test passed twice (MU -6.4% off the Aug 17 peak vs SNDK -14.6%, STX -17.3%). BUT: it is a cyclical at peak-cycle metrics --

advisor screen flags insider selling (-7.7%), max capex, 6x forward P/E on peak earnings. Hold the existing position; do NOT add new money. Hard exit if HBM contracts or Korean export data cracks.

* SPOT: D1 adding offsets P72/Coatue trims. Still core, but this is now the weakest sponsor profile in the cluster -- watch for a second quarter of trims.

3. Tier 2: Growth Compounders (20% target)

Asset | Manager(s) | vs Cost | Conviction | Action

TSM | 4/5 whales -- Coatue #1 (8.8%), Tepper ADDED to 10.2%, SA 6.2%, P72 | +28.7% | HIGH | ****SIZE-UP CANDIDATE**** -- best-supported name in the book, only \$387 held (Roth)

CEG | P72, Coatue, SIT (AI power theme) | -10.0% | HIGH | ACCUMULATE on dips; within 2% of 1-month high

GEV | P72, Coatue (trimmed to 6.2%), SIT | -17.9% | HIGH, eroding | ****HOLD, DO NOT ADD.**** 900 psych level broke intraday Mon (892.53). 892 = trailing level, not a doubling-down level. Nov 16 13Fs adjudicate the exit

VRT | P72, Coatue (prior accumulation) | -- | MEDIUM | HOLD; no fresh signal this cycle

AMD | Tepper/P72 trimming, SA EXITED | -- | DOWNgraded | ****REVIEW/TRIM -- whale consensus turned negative****; keep only if Q3 13Fs reverse

INTC | Tepper EXIT (validated) vs Coatue NEW \$1.2B (3.5% fund) | +97% | CONFLICTED | REVIEW/TRIM plan intact: trim into 95-100 reclaim, trail below 87.26. Two-sided signal = no new conviction either way

SPCX (SpaceX, private) | D1 61.9% (!), Coatue 6.5%, Tepper 0.5% -- ALL NEW | -- | WATCH | No retail action possible; whales just got access and D1 took maximum concentration. Track for listed proxies

Key development: The AMD downgrade is the "Tepper Exit Reversal" pattern plus a second manager -- SA exited entirely, Tepper and P72 both trimmed. When consensus turns negative from three directions simultaneously, respect it. This is now the highest-priority position to review at the November 13F cycle.

4. Tier 3: Inflation Hedges (10% target)

Asset | Type | Hedge Mechanism | Conviction

CEG/GEV/VRT (existing) | Power infrastructure | AI demand + supply-constrained generation | HIGH (CEG) / HOLD (GEV)

Energy sleeve: DVN, CVE (watchlist) | Commodity producers | Brent >\$90 tailwind; Iran war structurally distorting supply | MEDIUM

VST / NRG (Tepper holds 4.5% / 3.3%) | Independent power | Power-demand supercycle, merchant pricing | MEDIUM -- watchlist

VICI (value screen) | REIT, 7.0% yield | Real-asset income; 1% off 52-wk low, 4 upgrade headlines | TACTICAL ONLY -- Sept hike risk caps size

Defensive staples (JNJ, PM, KO, WMT, PG) | Pricing-power defensives | Pass inflation straight through; PG is a Point72 top-10 | HIGH as ballast

Regime note: Gold at \$4,680 (+4% over 3 months) and the USD at 98.8 confirm the inflation-hedge bid is real but crowded. No new gold entries signaled -- existing exposure only. If Warsh hikes in September, long-duration real assets (REITs, miners) will feel it first; energy producers and regulated power are the better-positioned hedges in a hike+oil-shock mix.

5. Cut List (What to Avoid)

Tactical avoid (conditions unchanged from Aug 24):

* NVDA -- no new money until -20% correction; valuation stretched.

* TSLA -- margin compression, FCF negative; -18.7% vs cost. Monday's +3.4% bounce is noise.

* MU (new money only) -- peak-cycle discipline; existing hold is fine.

* Bitcoin miners (CORZ, RIOT, CLSK, WULF, HUT, CIFR) -- Tier 3 speculation only. SA still holds CORZ 3.3%/RIOT 2.3% -- whale participation does not upgrade a narrative trade to a compounder. CLSK is -21.5% since Jul 31.

* APP -- fundamentals de-rating, -43.1% vs cost, no floor visible.

Crowded-short / attrition watch (SI data still Aug 15 settlement -- stale):

* RXRX 37% SI, dead flat, no catalyst.

* SEI 27.9% SI -- textbook attrition, 11+ down sessions.

* TEM 27.8% SI -- catalyst spent, +18.5% vs cost; light-trim zone is LIVE (trail below 60).

* WOLF, KSS -- permanent avoid (bankruptcy/dying retail).

* ZM -- advisor screen find (fortress balance sheet, 7% FCF yield) but PEG 4.2 and seat-price pressure; watchlist only, not a compounder.

Recent portfolio exits to respect: Tepper's AAPL put is a hedge, not a view. No strategist exits are knowable until Nov 16.

6. Strategy Playbook Update

Validated this cycle:

1. Sponsor A/B Test -- VALIDATED FOR A FULL MONTH. Same memory complex, three outcomes sorted by sponsorship since the Aug 17 peak: MU (3 managers) -6.4% and green Monday; SNDK (momentum-only) -14.6%; STX (momentum-only) -17.3%. Rule confirmed: hold the sponsored name, trim the unsponsored momentum name.

2. Tepper Exit Reversal -- VALIDATED AGAIN. INTC -12.4% in 10 days post-signal vs SPY -0.5%. Confidence raised (now 75%+). Counterpoint for November: Coatue opened a NEW \$1.2B INTC position -- if Hohn-tier managers accumulate where Tepper exited, the pattern gets a two-sided test.

3. NEW PATTERN -- Theme != Stock. In the same AI-power theme, CEG sits -1.9% off its high while GEV breaks 900 (-17.9%). Theme exposure does not protect a name losing its sponsors. Judge each name's sponsorship individually; never hold a theme through a breaking name.

4. NEW PATTERN -- Whale Private Access. SpaceX appeared at 3/5 whales in Q2, ALL NEW -- D1 at 61.9% fund weight (maximum possible concentration). When whales get access to a private asset they want, they take it with both hands. Track for accessible proxies/secondaries; no retail action available yet.

5. AMD consensus-flip downgrade rule -- FIRED. SA exit + Tepper trim + P72 trim in one quarter = automatic REVIEW/TRIM. No exceptions pending Q3 data.

Cash doctrine at CAPE 42: the 2000 rhyme argues patience. The portfolio's edge is that whales are concentrated in contracted-demand names (HBM, power) while the index carries narrative duration. Stay in the whale cluster, hold cash for the hike-driven selloff, and let Friday's jobs report set the entry timing for GOOGL/TSM adds.

7. Memory Update (recorded in agents/long-term-holds-memory.md)

* Holdings statuses refreshed (AMD downgrade, GEV hold-no-add, TSM size-up flag, MU hold-no-add).

* Performance tracking row added for 2026-09-01: CPI ~3.0-3.7%, September hike odds 52-57%, CAPE 42, Brent >\$90.

* Lessons logged: sponsor test month-long validation, Tepper exit revalidation, Theme-Ne-Stock, Whale Private Access, AMD consensus-flip rule.

Not investment advice. Thad makes final decisions; buying/hedging still requires his approval per the Aug 31 trading authority grant (sell-side autonomy only).
