Q2 2026 13F Holdings Analysis (positions as of June 30, 2026) | Generated: September 1, 2026

Executive Summary

This run re-validates the quarterly 13F analysis on the August 15 filing-deadline cycle. All five tracked managers filed Q2 2026 13Fs on August 14, 2026 (positions as of June 30); no new 13Fs exist until the Q3 cycle (due November 16, 2026). Data is parsed from the complete filings - including Point72's full 3,923-line book - and cross-checked live against per-filing endpoints on September 1. Your portfolio snapshot (July 31, 2026) is unchanged. Dominant whale themes: the memory/semiconductor supercycle (MU, TSM, SNDK), SpaceX's emergence at three of five whales, AI power and data-center energy infrastructure, and bitcoin miners pivoting to AI compute. Roughly 55% of your tracked positions sit in names owned by at least one whale; seven tickers are owned by 3+ of the five.

VRT	\$229	Coatue 0.6%	Low - Coatue small
JNJ	\$1,550	(P72 holds PUT only - bearish hedge, not ownership)	No whale ownership

Note: Point72 options overlays (calls/puts) exist on nearly every name and are excluded from the ownership columns. Notable directional option signals from Cohen's book: MU put+call (hedged core), SNDK put 0.2% (bearish hedge), TSLA put 0.2%, JNJ put 0.5%. Tepper's AAPL put 3.1% is notional-large but a hedge, not ownership.

Caution Flags

- AMD: Situational Awareness exited entirely; Point72 and Tepper both trimmed. You hold \$3,369. The whale consensus on AMD turned negative this quarter.
- SNDK concentration: Aschenbrenner's fund is 28% concentrated in Sandisk, but press coverage (24/7 Wall St., Aug 17) reported the position 'unraveled' sharply in early August. Your Roth is 21.6% SNDK - consider whether that single-name risk is intentional.
- SPCX: SpaceX only became 13F-visible this quarter. All three whale stakes are brand new - no track record of how they will manage it. Your combined \$6,295 predates their entry. D1's 61.9% single-name concentration is extreme even by its standards.
- 13F lag: all data is as of June 30, 2026, filed August 14, 2026 - whales may have already rotated in July/August (e.g., press reports of SA's SNDK unwind).
- P72 extended overlap is low-conviction by construction: Cohen's fund holds slices of thousands of names. Treat Point72-only overlaps (\$0.1-0.9% of fund) as weak signals; the 3+ whale names and SA/Tepper/Coatue/D1 concentration positions are the real signals.

Whale Themes Mapped to Your Portfolio

Theme	Whale Positions	Your Exposure

Status vs Prior Run (Aug 31, 2026)

- Same data quarter - and that is expected: Q2 2026 13Fs remain the latest until the Q3 cycle, due November 16, 2026. No manager filed anything new between Aug 14 and Sep 1 (re-verified via live search today).
- Portfolio unchanged: the newest Fidelity CSV on the Desktop is still the July 31, 2026 export. If you have traded since, export a fresh CSV before the next run for exact overlap values.
- Fix vs Aug 29-30 runs: the whale 'Top 10' tables previously ranked a share-count column (misabeled as \$ millions). This run ranks by the filings' actual reported value column - e.g., Point72's true top position is CRDO (\$1.67B, 1.8%), and D1's SpaceX line is \$21.5B at 61.9%. Percent-of-fund figures were always correct; only the dollar rankings changed.
- Overlap set unchanged: 40 tickers, \$137,964 (54.9%). Consensus names unchanged: AMZN, MU, TSM (4 of 5); SPCX, SPOT, AMD, GOOGL, GOOG (3 of 5).
- Next refresh: Q3 2026 13Fs, filed ~November 16, 2026 (deadline Nov 15 falls on a Sunday).

Methodology & Data Notes

- Sources: SEC Form 13F-HR filings (filed 2026-08-14, period 2026-06-30) for Point72 (CIK 1603466), D1 Capital (1747057), Appaloosa (1656456), Coatue (1135730), Situational Awareness (2045724). Holdings data via 13f.info per-filing JSON endpoints (full files, parsed programmatically); full re-parse run 2026-08-31; on Sep 1 latest-filing status re-verified via live search (Point72 most recent 13F = Q2 2026, filed 2026-08-14; no amendments found).
- Ownership = common-stock rows only. Call/put rows are treated as options overlays and reported separately. Warrants noted as such (P72 CORZW).
- 'Value' = 13F reported position value in \$000 as of June 30, 2026 (% of fund computed on that basis). Point72 also reports corporate bond notes (e.g., WEC, UGI) not used in equity overlap.
- 13F limitations: long US-listed positions only; shorts, foreign listings, most private stakes, and cash are not disclosed. Positions are up to 45 days stale.
- Portfolio source: Fidelity Portfolio Positions export dated July 31, 2026 (accounts 653524180, 653524181, 42107). The 401k snapshot (account 42107) holds index/target-date funds with no whale overlap.
- NBIG (Themes 2x leverage ETF) is unrelated to SA's NBIS (Nebius) despite the similar ticker.
- This is research, not investment advice.
