

Whale Watch Report

Q2 2026 13F Holdings Analysis (positions as of June 30, 2026) | Generated: September 4, 2026

Executive Summary

All five tracked managers (Steven Cohen/Point72, Daniel Sundheim/D1 Capital, David Tepper/Appaloosa, Philippe Laffont/Coatue, Leopold Aschenbrenner/Situational Awareness) remain on their Q2 2026 13Fs - positions as of June 30, filed August 14. Re-verified September 4: no manager has filed anything newer; the next data event is the Q3 cycle, due ~November 16, 2026. What HAS moved since the last completed run (September 2) is price and news, not filings. Your memory-complex positions ripped higher - SNDK +22% and MU +10% versus your July 31 CSV - while the whale exit-news cycle intensified: Tepper's complete Sandisk exit and 41% Micron trim were re-reported September 2-3, coverage emerged that Aschenbrenner's fund was forced to sell, and a China-memory-market-share narrative hit September 3. Meanwhile your BTC-miner/AI-infra cluster corrected hard (CIFR -23%, HUT -19%, CORZ -18%) and SpaceX stock kept rising with Wall Street heavily committed to it.

Caution Flags - Updated Sep 4

- Memory exit-news cycle (Sep 2-3): Tepper cut MU 41% and exited SNDK entirely (visible in the Q2 filing, re-reported this week by Motley Fool/Gate News), and bought puts on one of memory's largest customers. Insider Monkey (Sep 2) asked whether Aschenbrenner's fund was forced to sell MU/SNDK. Benzinga (Sep 3): Micron/SanDisk lag the tech rally as China grabs memory market share. Your cluster: MU \$7.5K + SNDK \$4.5K + STX \$5.9K = ~\$17.9K (~7% of book) - prices still rising, but the whales with the largest positions have been reducing into strength. Watch item, not advice.
- SNDK concentration: SA's fund is 28% concentrated in Sandisk and press indicates stress/forced selling; your Roth is 21.6% SNDK (+28% price since CSV). If the largest holder is a forced seller, your mark can move on flows, not fundamentals.
- Miner/AI-infra correction: CIFR -23%, HUT -19%, CORZ -18%, CLSK -13%, WULF -9% since Jul 31. SA still holds CORZ 3.3%, APLD 2.3%, RIOT 2.3%; Coatue added HUT 2.3% in Q2. Your crypto-infra cluster (\$19K+ combined) is in a drawdown inside a whale-owned theme.
- APP -22% since CSV (D1 1.0%, Coatue 1.2% own it) - whale-owned name correcting.
- SPCX: all three whale stakes are brand new; D1's 61.9% single-name concentration is extreme even by its standards. Your \$6,295 has no market price - illiquid/valuation risk.
- 13F lag: all positions are as of June 30 - whales may have rotated further in July/August (e.g., SA's SNDK unwind).
- P72-only overlaps are low-conviction by construction (slices of thousands of names). The 3+ whale names and SA/Tepper/Coatue/D1 concentration positions are the real signals.

Run Status & Continuity

- Last completed run: Sep 2, 2026. The Sep 3 6:00 AM run failed mid-pipeline during the cloud-502 model outage (fetch scripts ran; no PDF was produced). This Sep 4 run is the first completed report since.
- 13F data unchanged by design: Q2 2026 filings (filed Aug 14) remain the latest until the Q3 cycle, due ~Nov 16, 2026. Re-verified Sep 4 via EDGAR/13f.info search - no new or amended filings for any tracked manager.
- New this run: Yahoo Finance price refresh (Sep 3 close) applied to all 40 overlap tickers - extended overlap moves from \$137,964 (CSV) to ~\$145,488 current estimate.

- Portfolio CSV unchanged: Jul 31, 2026 export is still the newest on the Desktop. Export a fresh CSV before the next run for exact share counts.
- Next refresh: Q3 2026 13Fs, filed ~November 16, 2026 (Nov 15 deadline falls on a Sunday).

Methodology & Data Notes

- Sources: SEC Form 13F-HR filings (filed 2026-08-14, period 2026-06-30) for Point72 (CIK 1603466), D1 Capital (1747057), Appaloosa (1656456), Coatue (1135730), Situational Awareness (2045724). Holdings parsed from complete filings via 13f.info JSON endpoints (full re-parse 2026-08-31); latest-filing status re-verified 2026-09-04 via live EDGAR/13f.info search.
- Prices: Yahoo Finance daily closes through Sep 3, 2026, fetched Sep 4. Current-value estimates = Jul 31 CSV share counts x Sep 3 close; post-Jul-31 trades are not reflected.
- Ownership = common-stock rows only. Call/put rows are options overlays reported separately. Value = 13F reported value in \$000 as of June 30, 2026.
- 13F limitations: long US-listed positions only; shorts, foreign listings, most private stakes, and cash are not disclosed. Positions are up to 45+ days stale.
- Portfolio source: Fidelity Portfolio Positions export dated July 31, 2026 (accounts 653524180, 653524181, 42107). The 401k (42107) holds index/target-date funds with no whale overlap.
- NBIG (Themes 2x leverage ETF) is unrelated to SA's NBIS (Nebius). GOOGL row combines GOOGL + GOOG. SPCX is a private-company position with no market price.
- Educational research only - not investment advice.
