

Kalshi Cron Audit Report

Date: 2026-09-03, 5:15 AM CT
Scope: All Kalshi-related scheduled jobs - goal alignment, health, consolidation
Trigger: Thad directive: "make sure they are working towards the same goal and maybe combine jobs where relevant"

1. Goal Alignment Statement

Every Kalshi job must serve the core purpose: accurate predictions (4/5 target) -> disciplined execution -> bankroll compounding (\$28 -> ~\$73.74 since Aug 16) -> every miss becomes a coded rule. Jobs that silently collect dead data, duplicate each other at 6 AM on a 2-core laptop, or fail nightly work against that purpose and were fixed or removed.

2. Inventory After Cleanup (26 active jobs -> 19 active, 40 -> 33 total)

Job	Schedule	Status before	Action taken	Goal served
kalshi-morning-brief	5:45 AM Mon-Fri	NEW	Created (consolidates 3 jobs)	Prediction + execution
the-edge-morning	5:30 AM Mon-Fri	FAILED 3x (broken model pin)	Disabled (rolled into brief)	-
kalshi-daily-predictions	6 AM daily	FAILED (broken model pin)	Disabled (rolled into brief)	-
kalshi-job-morning	6 AM daily	FAILED (broken model pin)	Disabled (rolled into brief)	-
kalshi-position-monitor	Hourly	OK	Keep	Discipline (stop-loss/giveback)
kalshi-price-snapshots	Every 4h	SKIPPED (bad model pin)	Pin cleared + payload rewritten to daily	Learning data
the-edge-nightly	9 PM Mon-Fri	OK	Keep	Pick prep
weather-paper-trader	8 PM daily	OK	Keep	Prediction engine
kalshi-longshot-tracker	Nightly	OK	Keep	Lotto candidates
kalshi-weekly-review	Sat 10 AM	OK	Keep	Learning loop
kalshi-prompt-evolution	Fri	OK	Keep	Learning loop
twc-update-probe	Cron	OK	Keep	Settlement-source watch
kalshi-buy-alert-aug18/19, aug19-morning	Dead one-shot	Disabled since Aug	DELETED	Cleanup
kalshi-pre-close-check	Dead one-shot	Disabled	DELETED	Cleanup
kalshi-weather-morning-scan	5 AM daily	Disabled (delivery broken)	DELETED (superseded)	Cleanup
miami-longshot-watch	Stale payload	Disabled	DELETED (kalshi-longshot-tracker owns)	Cleanup
lotto-exit-watch	Disabled	Disabled	DELETED (position-monitor owns giveback)	Cleanup
ny-watch	One-day watch	Completed Aug 31/Sep 1	Removed earlier (Sep 1)	Completed

3. Root-Cause Fixes Applied

3.1 Broken model pins (why 3 jobs failed every morning)

The Aug 31 PROMPT-LAW program pinned jobs to model 'ollama-cloud/glm-5.2'. The OpenClaw update changed the model-policy allowlist to the new naming ('ollama/glm-5.2:cloud' family), so every pinned job was REJECTED at preflight before running. Three morning jobs failed consecutively (the-edge-morning 3x).

Fix: cleared the model override on the-edge-morning, kalshi-daily-predictions, kalshi-job-morning, kalshi-price-snapshots. Jobs now inherit the gateway default (ollama/glm-5.3-flash:cloud), which is proven working on this host. Lesson: model pins break silently when the provider naming changes - prefer clearing overrides unless a job genuinely needs a specific model.

3.2 Snapshot collector snapping dead markets

kalshi-price-snapshots hard-coded 'KXJOBLESSCLAIMS-26AUG20', 'KXCPI-26AUG', 'KXCPICORE-26AUG' - the claims event expired Aug 20. It "succeeded" for weeks while collecting nothing useful (silent failure mode).

Fix: new script 'scripts/kalshi_snapshots.py' discovers active events dynamically per series (claims / CPI / CPI-core / Fed), snaps up to 2 per series, verified live: 7 active events found including KXJOBLESSCLAIMS-26SEP03 (closes Sep 3, 7:25 AM CT).

3.3 Three jobs firing at once on a 2-core laptop

The 5:30 / 6:00 / 6:00 AM trio each ran the claims digest + web searches independently (the "BUDGET RULE" comment inside kalshi-job-morning documented the problem). Now ONE job at 5:45 AM with a hard web-search budget of 2.

4. Goal-Aligned Job Map (what serves what)

Goal layer	Jobs
Predict (engine)	weather-paper-trader, the-edge-nightly, kalshi-longshot-tracker, kalshi-price-snapshots
Decide/execute	kalshi-morning-brief, kalshi-position-monitor, gateway-watchdog
Learn	kalshi-weekly-review, kalshi-prompt-evolution, memory-dreaming
Settlement truth	twc-update-probe
Removed (noise)	7 dead jobs listed above

5. Verification & Rollback

- kalshi-morning-brief force-run test executed Sep 3 ~5:08 AM (results logged in memory + Telegram delivery).
- Superseded jobs are DISABLED, not deleted; payloads intact with PROMPT-LAW text. Rollback = set enabled:true (see agents/kalshi-morning-brief.md).
- REGISTRY.md updated to match.

6. The One Prediction Database (Thad directive, Sep 3 5:13 AM)

"All Jobs should be working toward making a better prediction model. That means one database that they can each make changes to."

Implemented same morning: 'data/kalshi_model.db' (SQLite WAL, git-backed) with shared API 'scripts/kalshi_db.py'.

Table	Contents	Who writes
predictions	every pick: source, kind, event, market, side, shares, odds, model	paper trader, morning brief, longshot tracker, manual trades
forecasts	model forecast history (city-day centers) + graded outcomes	weather_daily, grading steps
learnings	lessons + rule changes with hits/misses counters	grading, weekly review, prompt evolution
model_state	THE LIVING MODEL PARAMS: claims weights (Kalshi 0.70/analy	learning loop writes; every job READS (never hardcode)
snapshots	4h price history for timing analysis (3,305 rows migrated)	kalshi-price-snapshots (dual-write)

Migration done Sep 3: 44 forecast records, 27 band picks, 1 grading record, 10 signal-accuracy rows, 3,305 snapshots. Zero skips.

Why this matters: every job now contributes to ONE model. The morning brief syncs everything (STEP 2b), reads accuracy vs the 80% target, and reads model params from the DB. The learning loop updates weights in the DB, and the next prediction uses them. Prediction -> grade -> learn -> adjust weights -> predict better. The loop is closed and inspectable in one file.

7. Open Items (not cron-scoped but surfaced)

- Backups: doctor reports NO successful backup ever; 2 attempts produced zero archives. Needs a working backup path (workspace is git-backed, which covers code but not gateway state).
- openclaw status CLI hung twice on this box (unverified cause).
- Sep 10 claims cycle: normal week (Labor Day falls after it closes); Sep 17 cycle is the holiday-distorted one - plan smaller size there.
